Chapter 1

Getting Started

The Magellan® 1000i Omni-Directional Imaging Scanner offers hands-free scanning for small, easily handled items and handheld scanning for bulkier items. Its aggressive imaging performance and intuitive operation reduces user training and speeds checkout for better customer service.

About This Manual

This manual presents advanced user information which includes connection, programming, product and cable specifications, and other useful references. For additional information, such as installation, maintenance, troubleshooting and warranty information, see the Quick Reference Guide (QRG). Copies of other publications for this product are downloadable free of charge from the PSC website listed on the back cover of this manual.

On leaving the factory, units are programmed for the most common terminal and communications settings. If you need to change these settings, custom programming can be accomplished by scanning the bar codes in this guide.

Bold text and a yellow-highlighted background indicates the most common default setting for a feature/option.

Manual Conventions

The symbols listed below are used in this manual to notify the reader of key issues or procedures that must be observed when using the scanner:

NOTE

Notes contain information necessary for properly diagnosing, repairing and operating the scanner.

CAUTION

The CAUTION symbol advises you of actions that could damage equipment or property.

Connecting the Scanner

The scanner kit you ordered to match your interface should provide a compatible cable for your installation. Use the appropriate instructions below to connect the scanner to the terminal, PC or other host device.

Upon completing the connection via the appropriate interface instructions below, proceed to the [Interface Related Features](#) section of this manual and scan the bar code to select the correct interface type.

RS-232 Serial Connection — Turn off power to the terminal/PC and connect the scanner to the terminal/PC serial port via the RS-232 cable as shown in [Figure 1](#). If the terminal will not support POT (Power Off the Terminal) to supply scanner power, use the approved power supply (AC Adapter). Plug the AC Adapter barrel connector into the socket on the RS-232 cable connector and the AC Adapter plug into a standard power outlet.

Figure 1. RS-232 Serial or USB Connection using A/C Adapter

USB Connection — Connect the scanner to a USB port on the terminal/PC using the correct USB cable for the interface type you ordered. Reference [Figure 1](#) and [Figure 2](#).

NOTE

USB installations may require a power connection via an approved A/C Adapter as shown in [Figure 1](#). For example, this would be the case if the scanner is connected along with a number of other devices to a non-powered USB hub.

Figure 2. Other Connection Types

Wand Emulation Connection — Connect the scanner to the appropriated port on the terminal/PC using the correct cable for the interface type you ordered. Reference [Figure 2](#).

IBM Connection — Connect the scanner to the IBM port on the terminal/PC using the correct IBM cable. Reference [Figure 2](#).

Keyboard Wedge Connection — Before connection, turn off power to the terminal/PC. The Keyboard Wedge cable has a ‘Y’ connection from the scanner. Connect the female to the male end from the keyboard and the remaining end at the keyboard port at the terminal/PC. Reference [Figure 2](#).

Programming

The scanner is typically factory-configured with a set of default features standard to the interface type you ordered. After scanning the interface bar code from the [Interface Related Features](#) section, you can select other options and customize your scanner through use of the instructions and programming bar codes available in that section and also the [Data Editing](#) and [Symbologies](#) chapters of this manual.

Using the Programming Bar Codes

This manual contains feature descriptions and bar codes which allow you to reconfigure your scanner. Some programming bar code labels, like the label below for resetting defaults, require only the scan of that single label to enact the change. Most of the programming labels in this manual, however, require the scanner to be placed in Programming Mode prior to scanning them. Scan a START/END bar code once to enter Programming Mode. Once the scanner is in Programming Mode, you can scan a number of parameter settings before scanning the START/END bar code a second time, which will then accept your changes, exit Programming Mode and return the scanner to normal operation.

Resetting the Standard Product Defaults

If you are unsure of what programming options are in your scanner, or you’ve changed some options and want the factory settings restored, scan the *Standard Product Default Settings* bar code below. This will copy the factory configuration for the currently active interface to the current configuration.

Standard Product Default Settings

The programming section lists the factory default settings for each of the menu commands for the standard RS-232 interface in **BOLD** text on the following pages. Exceptions to default settings for the other interfaces can be found in [Appendix D, Default Settings](#).

Error Codes

Upon startup, if the scanner flashes its indicator LED or sounds an unexpected series of beep tones (other than normal power-up indications), this means the scanner has not passed its automatic Selftest and has entered FRU¹ isolation mode. If the scanner is reset or the trigger is pulled, the sequence will be repeated. The following table describes the LED flashes/beep codes associated with an error found.

NUMBER OF LED FLASHES/ BEEPS	ERROR	CORRECTIVE ACTION
1	Configuration	Contact Helpdesk for assistance
2	Interface PCB	
6	Main PCB	
10	Button Error	
12	Imager Module	
13	Software ID Failure	
14	CPLD/Code Mismatch	

1. Field Replaceable Unit (FRU)

Chapter 2

General Features

Double Read Timeout

The Double Read Timeout feature sets a time limit that determines how much time must pass before reading the same label again (e.g. two identical items in succession).

	START / END
PROGRAMMING BARCODES	
0.1 Second	
	0.2 Second
0.3 Second	
	0.4 Second DEFAULT
0.5 Second	
	0.6 Second

Double Read Timeout – cont.

	START / END
PROGRAMMING BARCODES	
0.7 Second	
	0.8 Second
0.9 Second	
	1 Second

Label Gone Timeout

This feature sets the time after the last label segment is seen before the scanner prepares for a new label.

START / END	
PROGRAMMING BARCODES	
<p>Sets the label gone timeout duration using hex values from 0 to FF in increments of ten milliseconds (10ms or 0.01 seconds). To configure this feature, scan the "START/END" bar code above to place the unit in Programming Mode, then the "Set Label Gone Timeout," followed by the digits from the Alphanumeric table in Appendix C. Alpha-Numeric Pad representing the desired time value. Exit programming mode by scanning the "START/END" bar code again.</p> <p style="text-align: center;">DEFAULT SETTING FOR THIS FEATURE: 320 milliseconds (20 hex)</p>	
	Set Label Gone Timeout

Sleep Mode

This feature specifies the amount of time with no bar code reads before the scanner enters sleep mode.

	START / END
PROGRAMMING BARCODES	
15 Seconds	
	30 Seconds
1 Minute	
	2 Minutes
3 Minutes

12 Minutes	
	15 Minutes
30 Minutes	
	1 Hour

LED and Beeper Indicators

Power On Alert

Disables or enables the indication (a single beep) that the scanner has finished all its power up tests and is now ready for operation.

	START / END
PROGRAMMING BARCODES	
Disable	
	Enable DEFAULT

Good Read: When to Indicate

This feature specifies when the scanner will provide indication (beep and/or flash its green LED) upon successfully reading a bar code. Choices are:

- Good Read = Indicate after decode
- Good Read = Indicate after transmit
- Good Read = Indicate after CTS goes inactive, then active

This option (Indicate after CTS goes inactive, then active), which uses CTS, is only valid for RS-232 interfaces.

NOTE

	START / END
PROGRAMMING BARCODES	
After Decode DEFAULT	
	After Transmit
After CTS goes inactive, then active	

Good Read Beep Control

This feature enables/disables the scanner's ability to beep upon a successful decode of a bar code.

	START / END
PROGRAMMING BARCODES	
Disable	
	Enable DEFAULT

Good Read Beep Frequency

Adjusts the good read beep to sound at a selectable low, medium or high frequency, selectable from the list below. (Controls the beeper's pitch/tone.)

	START / END
PROGRAMMING BARCODES	
Low	
	Medium DEFAULT
High	

Good Read Beep Length

Specifies the duration of a good read beep.

	120msec
140msec	
	160msec
180msec	
	200msec

Good Read Beep Volume

Selects the beeper volume (loudness) upon a good read beep. There are three selectable volume levels.

	START / END
PROGRAMMING BARCODES	
Low	
	Medium
High DEFAULT	

Scanning Features

Targeted Scanning Mode

Upon pressing the button, the scanner will project an aiming pattern to assist in centering over the bar code. Scanning then takes place as soon as the button is released.

NOTE

Targeted Scanning Mode will read bar codes in any orientation.

The scanner will return to full pattern Omni-directional Mode after [Target Mode Active Time](#) has elapsed.

Configuration options for Targeted Scanning Mode are:

- Target Mode Active Time
- Target Mode Linger Time

Target Mode Active Time

Specifies the time duration the scanner attempts to decode labels while in the targeted mode of operation.

	START / END
PROGRAMMING BARCODES	
Extra Short Duration	
	Short Duration
Medium Duration DEFAULT	
	Long Duration

Target Mode Linger Time

Specifies the time duration the scanner remains in the targeted mode of operation after reading a bar code before reverting to Omni-directional Mode.

START / END		
PROGRAMMING BARCODES		
		Short Duration
Medium Duration DEFAULT		
		Long Duration

Wake Up Intensity

This feature indicates the percentage of ambient light change which will trigger the scanner to wake up from Sleep Mode. Lower settings provide greater sensitivity. The selectable range for this setting is 5% to 15%.

	START / END
PROGRAMMING BARCODES	
5%

Interface Features

Obey/Ignore Host Commands

When set to ignore host commands, the scanner will ignore all host commands except for the minimum set necessary to keep the interface active and transmit labels. For normal operation of the interface, select Obey Host Commands.

START / END	
PROGRAMMING BARCODES	
	Obey Host Commands DEFAULT
Ignore Host Commands	

Interface Features – cont.

Host Transmission Buffers

Specifies the number of host transmission(s) that may be buffered. By buffering data from a bar code, the scanner can continue to read a new bar code while the old one is being transmitted to the host. Selecting BUFFERS = 1 means that the first bar code must be transmitted before a new one can be read. A selection of BUFFERS = 2 means that a new bar code can be read while data from the first bar code is transmitted.

When a DISABLE SCANNER command is received from the host, the scanner will continue to transmit all data that is buffered.

RS-232 Interface Features — cont.

Hardware Flow Control

Disable Hardware Control— The scanner transmits to the host regardless of any activity on the CTS line.

Enable CTS Flow Control— The CTS signal controls transmission of data to the host.

Enable CTS Scan Control— The CTS line must be active for the scanner to read and transmit data. While the CTS line is inactive, the scanner remains in a host-disabled state; following a successful label transmission, the CTS signal must transition to inactive and then to active to enable scanning for the next label.

START / END	
PROGRAMMING BARCODES	
	Disable Hardware Control DEFAULT
Enable CTS Flow Control	
	Enable CTS Scan Control

RS-232 Interface Features – cont.

Intercharacter Delay

This delay is inserted after each data character transmitted. If the transmission speed is too high, the system may not be able to receive all characters. You may need to adjust the delay to make the system work properly.

START / END	
PROGRAMMING BARCODES	
	Inter-Char Delay = No Delay DEFAULT
Interchar Delay = 10 msec	
	Interchar Delay = 20 msec
Interchar Delay = 30 msec	
	Interchar Delay = 40 msec
Interchar Delay = 50 msec	
	Interchar Delay = 60 msec
Interchar Delay = 70 msec	

Intercharacter Delay – cont.

START / END	
PROGRAMMING BARCODES	
	Interchar Delay = 80 msec
Interchar Delay = 90 msec	

Software Flow Control

Disables/Enables software control using XON/XOFF characters.

START / END	
PROGRAMMING BARCODES	
	Disable Software Flow Control DEFAULT
Enable Software Flow Control	

RS-232 Interface Features – cont.

Host Echo

When enabled, this feature passes all data through the scanner to the host as it comes in. This feature is used for applications where “daisy chaining” of RS-232 devices onto the same cable is necessary. If, for example, one of the devices in the chain is a terminal where someone is entering data while another person is simultaneously scanning a bar code requiring transmission to the host, the scanner will wait for the RS-232 channel to be quiet for a specified period of time (set via *RS-232 Host Echo Quiet Interval*). The scanner can be set to observe this delay before sending its data in order to avoid RS-232 transmission conflicts.

START / END	
PROGRAMMING BARCODES	
	Disable Host Echo DEFAULT
Enable Host Echo	

RS-232 Interface Features — cont.

Host Echo Quiet Interval

This setting specifies the time interval of RS-232 channel inactivity which must transpire before the scanner will break the host echo loop to transmit the bar code data that has just been scanned to the host.

START / END	
PROGRAMMING BARCODES	
	Host Echo Quiet Interval = 0msec
Host Echo Quiet Interval = 10msec DEFAULT	
	Host Echo Quiet Interval = 20msec
Host Echo Quiet Interval = 30msec	
	Host Echo Quiet Interval = 40msec
Host Echo Quiet Interval = 50msec	
	Host Echo Quiet Interval = 60msec
Host Echo Quiet Interval = 70msec	

Host Echo Quiet Interval – cont.

START / END	
PROGRAMMING BARCODES	
	Host Echo Quiet Interval = 80msec
Host Echo Quiet Interval = 90msec	
	Host Echo Quiet Interval = 100msec

Signal Voltage: Normal/TTL

Specifies whether the RS-232 interface provides TTL levels on the output pins TxD and RTS.

START / END	
PROGRAMMING BARCODES	
	Signal Voltage: Normal RS-232 DEFAULT
Signal Voltage: TTL	

RS-232 Invert

Enables/disables inversion of RS-232 TXD and RXD signals.

START / END	
PROGRAMMING BARCODES	
	Disable RS-232 Invert DEFAULT
Enable RS-232 Invert	

Beep on ASCII BEL

Enables/disables ability of scanner to beep (sound a good read tone) on receiving an ASCII BEL (07 hex).

START / END	
PROGRAMMING BARCODES	
	Enable Beep on ASCII BEL DEFAULT
Disable Beep on ASCII BEL	

Beep on Not on File

Select for the host to beep (or not) when a not-on-file (host command) condition is detected by the host.

START / END	
PROGRAMMING BARCODES	
	Disable Beep on Not On File
Enable Beep on Not On File DEFAULT	

ACK NAK Options

This enables/disables the ability of the scanner to support the RS-232 ACK/NAK protocol. When configured, the scanner and/or host sends an “ACK” when it receives data properly, and sends “NAK” when the data is in error. Selections for this option are:

- Disable
- Enable for label transmission — the scanner expects an ACK/NAK response from the host when a label is sent
- Enable for host-command acknowledge — the scanner will respond with ACK/NAK when the host sends a command
- Enable for label transmission and host-command acknowledge

START / END	
PROGRAMMING BARCODES	
	Disable ACK NAK DEFAULT
Enable ACK NAK for Transmission

RS-232 Interface Features – cont.

ACK NAK Retry Count

START / END

PROGRAMMING BARCODES

This feature sets the number of times for the scanner to retry a label transmission under a retry condition.

0 = No retry

1 - 254 = Retry for the specified number of times

255 = Retry forever

To configure this feature, scan the “START/END” bar code above to place the unit in Programming Mode, then the “Set ACK NAK Retry Count,” followed by the digits from the Alphanumeric table in [Appendix C. Alpha-Numeric Pad](#) representing your desired retry count. Exit programming mode by again scanning the “START/END” barcode above

DEFAULT SETTING FOR THIS FEATURE: 03

Set ACK NAK Timeout Value

ACK NAK Error Handling

This item specifies the method the scanner will use to handle errors detected while waiting to receive the ACK character from the host. Errors include unrecognized host commands and communication errors such as parity or framing errors. Choices are:

00 = Ignore errors detected (recommended setting)

01 = Process error as valid ACK character (risk of lost label data)

02 = Process error as valid NAK character (risk of duplicate label data)

START / END	
PROGRAMMING BARCODES	
	Ignore Errors Detected DEFAULT
Process error as valid ACK character	
	Process error as valid NAK character

RS-232 Interface Features – cont.

Transmission Failure Indication

Enables/disables bad-label indication upon transmission failure.

START / END	
PROGRAMMING BARCODES	
	Disable Transmission Error Indication
Enable Transmission Error Indication DEFAULT	

IBM-USB Interface Features

IBM-USB Device usage

The IBM-USB protocol allows for the scanner to be identified as one of two different types of bar code scanners. Depending on what other scanners you may already have connected to a IBM-USB POS, you may need to change this setting to enable all devices to communicate.

Options are:

- Table Top Scanner
- Handheld Scanner

START / END	
PROGRAMMING BARCODES	
	Configure as Table Top Scanner
Configure as Handheld Scanner DEFAULT	

IBM

IBM Transmit Labels in Code 39 Format

This feature enables/disables scanner's ability to set a symbology identifier for a specified label to Code 39 before transmitting that label data to an IBM host. This applies to: Code 128, Codabar and Code 93 for IBM USB; Code 128, Codabar and Code 93 for IBM Port 5B; and Codabar and Code 93 for IBM Port 9B.

START / END	
PROGRAMMING BARCODES	
	Disable Convert to Code 39 DEFAULT
Enable Convert to Code 39	

Wand Emulation

Supported Symbologies

The Wand Emulation interface will transmit bar code data as a wand device would. This interface will transmit the following bar code symbologies:

- UPC/EAN
- UPC/EAN with add-ons
- Code 39
- Full ASCII Code 39
- Interleaved 2 of 5
- Codabar
- Code 128

Pharmacode 39 is transmitted as Code 39. All other bar code symbology types read by the scanner will be transmitted as Code 128.

Wand Emulation Bar Code Format

The following format settings are required for the wand emulation interface. These settings have been pre-configured at the factory for Wand Emulation scanners.

- UPC-A bar codes must include all 12 digits.
- UPC-E bar codes must contain 8 digits, including a system digit, 6 data digits, and the check digit.
- EAN-13 bar codes must have all 13 digits.
- EAN-8 bar codes must include all 8 digits.
- Code 39, Code 39 Full ASCII, and Pharmacode 39 bar codes must NOT contain start / stop characters.
- Codabar bar codes must include the start / stop characters, presented in the ABCD format.
- Interleaved 2 of 5 bar codes must have an even number of digits.

Wand Emulation — cont.

Bar/Space Polarity

Low/High — Black will be transmitted as a low voltage level (0 to +0.7V) and space as high level (+2.4 to +5.25V).

High/Low — Black will be transmitted as a high voltage level (+2.4 to +5.25V) and space as low level (0 to +0.7V).

START / END	
PROGRAMMING BARCODES	
	Bar/Space = Low/High
Bar/Space = High/Low DEFAULT	

Wand Idle State

This feature specifies the level of the wand output signal when idle. TTL logic levels:

High voltage level (+2.4 to +5.25V)

Low voltage level (0 to +0.7V).

START / END	
PROGRAMMING BARCODES	
	Wand Idle State = Low DEFAULT
Wand Idle State = High	

Wand Emulation – cont.

Signal Speed

The speed of the transmission can be set. This selects the width of the minimum narrow bar.

330 microseconds

660 microseconds

START / END	
PROGRAMMING BARCODES	
	Signal Speed = 330mS
Signal Speed = 660mS DEFAULT	

Transmit Trailing Noise

The transmission of noise pulses after the label may be enabled or disabled.

START / END	
PROGRAMMING BARCODES	
	Disable Trailing Noise
Enable Trailing Noise DEFAULT	

Wand Emulation – cont.

Transmit Leading Noise

The transmission of noise pulses before the bar code may be enabled or disabled.

START / END	
PROGRAMMING BARCODES	
	Disable Leading Noise
Enable Leading Noise DEFAULT	

Symbology Conversion

Wand Emulation can convert all bar codes to a single symbology. Choices are:

- No Conversion
- Convert to Code 39
- Convert to Code 128

START / END	
PROGRAMMING BARCODES	
	No Symbology Conversion DEFAULT
Convert to C39	
	Convert to C128r

Keyboard Wedge and USB Keyboard

As a keyboard interface, the scanner supports most popular PCs and IBM terminals. The installation of the wedge is a fairly simple process that doesn't require any changes of software or hardware.

NOTE

All of the options in this section apply to the Keyboard Wedge, however, only some apply to USB Keyboard.

Keyboard Layout

The Keyboard Layout option supports many countries. For details about Keyboard Layout, please refer to your operating system manual.

PROGRAMMING BARCODES	
	Disable Caps Lock DEFAULT
Caps Lock "ON"	
	Shift Lock "ON"

Keyboard Wedge – cont.

Power-On Simulation

This feature does not apply to the USB Keyboard interface.

NOTE

All PCs check the keyboard status during the power-on Selftest. It is recommended that you enable this function if you are working without a keyboard installation. It simulates keyboard timing and passes the keyboard status to the PC during power-on.

START / END	
PROGRAMMING BARCODES	
	Disable Power-on Simulation DEFAULT
Enable Power-on Simulation	

Control Characters

Specifies how the scanner transmits ASCII control characters to the host. Choices are:

- Disable Control Characters
- Enable transmission of control characters to host
- Send characters between 00H and 1FH according to a special function-key mapping table. (This is used to send keys that are not in the normal ASCII set; a unique set is provided for each available scancode set. Reference [Appendix E, Keyboard Function Key Mappings.](#))

START / END	
PROGRAMMING BARCODES	
	Disable Control Characters DEFAULT
Enable Transmission of Control Characters	
	Enable Function Key Mapping

Keyboard Wedge – cont.

Wedge Quiet Interval

NOTE

This feature does not apply to the USB Keyboard interface.

Quiet Interval is the amount of time to look for keyboard activity before the scanner breaks the keyboard connection in order to transmit data to the host.

START / END	
PROGRAMMING BARCODES	
<p>Selectable from 00 (no interval) to 255 in 10 msec increments. Use hexadecimal (range: 00 to FF hexadecimal) to set the interval. To configure this feature, scan the “START/END” bar code above to place the unit in Programming Mode, then the Set Wedge Quiet Interval bar code followed by the digits from the Alphanumeric table in Appendix C. Alpha-Numeric Pad representing your desired length. Exit programming mode by again scanning the “START/END” barcode above.</p> <p style="text-align: center;">DEFAULT SETTING FOR THIS FEATURE: 0A (100 msec)</p>	
	Set Wedge Quiet Interval

Keyboard Wedge – cont.

Intercharacter Delay

NOTE

This feature does not apply to the USB Keyboard interface.

START / END

PROGRAMMING BARCODES

One-half of the delay specified below is inserted between scancodes within each character. If the transmission speed is too high, the system may not be able to receive all characters. You may need to adjust the delay to make the system work properly. Selectable from 00 to 255 in 10msec increments. Use hexadecimal (range: 00 to FF hexadecimal) to set the delay.

To configure this feature, scan the “START/END” bar code above to place the unit in Programming Mode, then the “Set Intercharacter Delay,” followed by the digits from the Alphanumeric table in [Appendix C. Alpha-Numeric Pad](#) representing your desired length. Exit programming mode by again scanning the “START/END” barcode above/

DEFAULT SETTING FOR THIS FEATURE:

00 (No Delay)

Set Intercharacter Delay

Chapter 4

Data Editing

Data Editing Overview

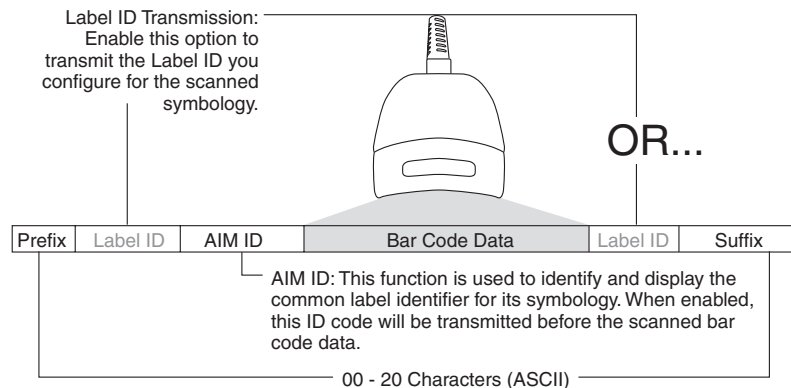

CAUTION

It is not recommended to use these features with IBM or Wand Emulation interfaces.

When a bar code is scanned, additional information can be sent to the host computer along with the bar code data. This combination of bar code data and supplementary user-defined data is called a “message string.” The features in this chapter can be used to build specific user-defined data into a message string.

There are several types of selectable data characters that can be sent before and after scanned data. You can specify if they should be sent with all symbologies, or only with specific symbologies. [Figure 4-1](#) shows the available elements you can add to a message string:

Figure 4-1. Breakdown of a Message String

Please Keep In Mind...

- Modifying a message string is not a mandatory requirement. Data editing is sophisticated feature allowing highly customizable output for advanced users. Factory default settings for data editing is typically set to NONE.
- A prefix or suffix may be applied (reference the [Symbologies](#) chapter for these settings) across all symbologies (set via the Global features in this chapter).
- You can add any character from the [ASCII Chart](#) (from 00-FF) on the inside back cover of this manual as a prefix, suffix or Label ID.

- Enter prefixes and suffixes in the order in which you want them to appear on the output.

Global Prefix/Suffix

Up to 20 ASCII characters may be added as a prefix (in a position before the bar code data) and/or as a suffix (in a position following the bar code data) as indicated in [Figure 4-2](#).

Figure 4-2. Prefix and Suffix Positions

Example: Setting a Prefix

In this example, we'll set a prefix for all symbologies.

1. Determine which ASCII character(s) are to be added to scanned bar code data. In this example, we'll add a dollar sign ('\$') as a prefix.
2. Scan the START bar code.
3. Scan the SET PREFIX bar code.
4. Reference the [ASCII Chart](#) on the inside back cover of this manual, to find the hex value assigned to the desired character. The corresponding hex number for the '\$' character is 24. To enter this selection code, scan the '2' and '4' bar codes from [Appendix C. Alpha-Numeric Pad](#).
5. Scan the END bar code to exit Programming Mode.

If less than the expected string of 20 characters are selected, scan the END bar code twice to accept the selections and exit Programming Mode.

NOTE

6. The resulting message string would appear as follows:
Scanned bar code data:12345
Resulting message string output: \$12345

Global Prefix/Suffix – cont.

START / END	
PROGRAMMING BARCODES	
<p>Sets up to 20 characters each from the set of ASCII characters or any hex value from 0 to FF. To configure this feature, scan the “START/END” bar code above to place the unit in Programming Mode, then the “Set Prefix” or “Set Suffix,” followed by the digits from the Alphanumeric table in Appendix C. Alpha-Numeric Pad representing your desired character(s). Reference the section, "Example: Setting a Prefix", for more information. Exit programming mode by scanning the “START/END” barcode again (scan “START/END” twice if less than 20 characters have been selected).</p> <p style="text-align: center;">DEFAULT SETTING FOR THIS FEATURE: 00 (None)</p>	
	Set Prefix
Set Suffix	

AIM ID

AIM (Automatic Identification Manufacturers) label identifiers are assigned from a globally standardized list — as opposed to custom label ID characters you select yourself — and can be included with scanned bar code data. AIM label identifiers consist of three characters as follows:

- A close brace character (ASCII ‘}’), followed by...
- A code character (see the table below), followed by...
- A modifier character (the modifier character is symbol dependent)

SYMBOLGY	CHAR	SYMBOLGY	CHAR
UPC/EAN	E	Code 128/EAN 128	C
Code 39	A	MSI/Plessey	M
Codabar	F	RSS (RSS-14, RSS Expanded)	e
Interleaved 2 of 5	I	Standard 2 of 5	S
Code 93	G	ISBN	X ^a

a. ISBN (X with a 0 modifier character)

Figure 4-3. AIM ID

START / END	
PROGRAMMING BARCODES	
	Disable AIM ID DEFAULT
Enable AIM ID	

Label ID

A Label ID is a customizable code of up to two ASCII characters (00-FF), used to identify a bar code (symbology) type. See [Appendix D. Default Settings](#), for a listing for common symbologies. It can be appended previous to or following the transmitted bar code data depending upon how this option is enabled. This feature provides options for configuring custom Label IDs individually per symbology. If you wish to program the scanner to always include an industry standard label identifier for ALL symbology types, see the previous feature, [AIM ID](#).

To configure a Label ID:

1. Scan the START bar code.
2. Select Label ID position as either BEFORE or AFTER by scanning the appropriate bar code.
3. Scan a bar code to select the symbology for which you wish to configure a custom Label ID.
4. Determine the desired character(s) (you may choose either one or two) which will represent the Label ID for the selected symbology. Next, turn to the [ASCII Chart](#) on the inside back cover of this manual and find the equivalent hex digits associated with your choice of Label ID. For example, if you wish to select an equal sign (=) as a Label ID, the chart indicates its associated hex characters as 3D.
5. Turn to [Appendix C. Alpha-Numeric Pad](#) and scan the bar codes representing the hex characters determined in the previous step. For the example given, the characters '3' and 'D' would be scanned.
6. Scan the END bar code to exit programming mode.

Case Conversion

This feature can convert scanned bar code data to either all lower case (a through z) or all upper case (A through Z) characters.

Case conversion affects **ONLY** scanned bar code data, and does not affect Label ID, Prefix, Suffix, or other appended data.

NOTE

START / END	
PROGRAMMING BARCODES	
	Disable DEFAULT
Convert to Upper Case	
	Convert to Lower Case

Character Conversion

Character conversion is an eight byte configuration item. The eight bytes are 4 character pairs represented in hexadecimal ASCII values. The first character in the pair is the character that will be converted. The second character in the pair is the character to convert to. If the character to convert in a pair is **FE**, then no conversion is done.

For example, if you have the character conversion configuration item set to the following:

41423132FFFFFFF

The first pair is **4142** or AB (**41** hex is an ASCII capital A, **42** hex is an ASCII capital B) and the second pair is **3132** or 12 (**31** hex is an ASCII 1, **32** is an ASCII 2). The other two pairs are **FFFF** and **FFFF**.

With the label, AG15TA81, it would look as follows after the character conversion:
BG25TB82.

The A characters were converted to the B character and the 1 characters were converted to the numeral 2 character. Nothing is done with the last two character pairs, since they are all **FE**.

To set Character Conversion:

1. Scan the START/END bar code.
2. Scan the Character Conversion bar code.
3. Determine the desired string. Up to sixteen positions can be determined as in the above example. Next, turn to the [ASCII Chart](#) on the inside back cover of this manual and find the equivalent hex digits needed to fulfill the string.
4. Turn to [Appendix C, Alpha-Numeric Pad](#) and scan the bar codes representing the hex characters determined in the previous step.
5. Scan the START/END bar code to exit Programming Mode.

If less than the expected string of 16 characters are selected, scan the START/END bar code twice to accept the selections and exit Programming Mode.

NOTE

Send Check Digit DEFAULT	

UPC-E – continued

Number System Digit

The Number System Digit (NSD) which is always a zero (0) in the leading position can be optionally included (or not) with scanned bar code data.

START / END	
PROGRAMMING BARCODES	
	Exclude Number System Digit DEFAULT
Include Number System Digit	

Expand to UPC-E to UPC-A

Enables/disables expansion of UPC-E labels to UPC-A. Selecting this feature also changes the symbology ID to match those required for UPC-A.

START / END	
PROGRAMMING BARCODES	
	Don't Expand UPC-E to UPC-A DEFAULT
Expand UPC-E to UPC-A	

UPC-E – continued

Expand UPC-E to EAN13

Enables/disables expansion of UPC-E labels to EAN-13. Selecting this feature also changes the symbology ID to match those required for EAN-13.

START / END	
PROGRAMMING BARCODES	
	Don't Expand UPC-E to EAN-13 DEFAULT
Expand UPC-E to EAN-13	

Minimum Reads

This feature specifies the minimum number of consecutive times a UPC-E label must be decoded before it is accepted as good read.

START / END	
PROGRAMMING BARCODES	
	Minimum = 1 Read
Minimum = 2 Reads DEFAULT	
	Minimum = 3 Reads
Minimum = 4 Reads	

GTIN

The following options apply to the GTIN label data format.

Expand UPC/EAN to GTIN

When this feature is enabled, the scanner will translate UPC/EAN labels to the 14 digit GTIN format.

START / END	
PROGRAMMING BARCODES	
	Don't Expand to GTIN DEFAULT
Expand to GTIN	

EAN-13

The following options apply to the EAN-13 symbology.

Disable/Enable EAN-13

When disabled, the scanner will not read EAN-13 bar codes.

START / END	
PROGRAMMING BARCODES	
	Disable EAN-13
Enable EAN-13 DEFAULT	

Check Digit Transmission

Enable this option to transmit the check digit along with EAN-13 bar code data.

START / END	
PROGRAMMING BARCODES	
	Don't Send Check Digit
Send Check Digit DEFAULT	

EAN-13 – continued

EAN-13 Flag 1 Character

Enables/disables transmission of an EAN/JAN13 Flag1 character.

START / END	
PROGRAMMING BARCODES	
	Don't Transmit EAN-13 Flag 1 Char
Transmit EAN-13 Flag 1 Char DEFAULT	

ISBN

When enabled, this feature truncates the leading three digits from labels that contain ISBN (International Standard Book Number) and appends an ISBN check character to the end of the label. These codes are used for books and magazines. Labels with ISBN codes start with "978".

Example:

Bar code data: "9789572222720"
 Output: "9572222724"

START / END	
PROGRAMMING BARCODES	
	Disable ISBN DEFAULT
Enable ISBN	

EAN-13 – continued

Minimum Reads

This feature specifies the minimum number of consecutive times an EAN-13 label must be decoded before it is accepted as good read.

START / END	
PROGRAMMING BARCODES	
	Minimum = 1 Read DEFAULT
Minimum = 2 Reads	
	Minimum = 3 Reads
Minimum = 4 Reads	

EAN-8

The following options apply to the EAN-8 symbology.

Disable/Enable EAN-8

When disabled, the scanner will not read EAN-8 bar codes.

START / END	
PROGRAMMING BARCODES	
	Disable EAN-8
Enable EAN-8 DEFAULT	

Check Digit Transmission

Enable this option to transmit the check Digit along with EAN-8 bar code data.

START / END	
PROGRAMMING BARCODES	
	Don't Send Check Digit
Send Check Digit DEFAULT	

EAN-8 — continued

Expand EAN-8 to EAN-13 — Expands EAN-8 data to the EAN-13 data format. Selecting this feature also changes the symbology ID to match those required for EAN-13.

START / END	
PROGRAMMING BARCODES	
	Don't Expand to EAN-13 DEFAULT
Expand to EAN-13	

Minimum Reads

This feature specifies the minimum number of consecutive times an EAN-8 label must be decoded before it is accepted as good read.

START / END	
PROGRAMMING BARCODES	
	Minimum = 1 Read DEFAULT
Minimum = 2 Reads	
	Minimum = 3 Reads
Minimum = 4 Reads	

Enable EAN Two-Label

Enables/disables the ability of the scanner to decode EAN two-label pairs.

START / END	
PROGRAMMING BARCODES	
	Disable EAN Two-Label
Enable EAN Two-Label	

Add-ons

Add-ons (or supplemental characters) are commonly added to the end of UPC/EAN bar codes. The scanner will read the add-ons if they are enabled and in the field of view. Three add-on types are supported: 2-digit, 5-digit and Code 128 add-ons. Supported options are:

None — This option directs the scanner to ignore add-on portion of a UPC/EAN bar code but still read the main portion of the bar code.

2 Digits — The scanner will optionally read 2-digit add-ons with the UPC/EAN label.

5 Digits — The scanner will optionally read 5-digit add-ons with the UPC/EAN label.

Code 128 Add-on — The scanner will optionally read Code 128 add-ons with the UPC/EAN label.

NOTE

Contact Customer Support for advanced programming of optional and conditional add-ons.

3. Scan the START/END bar code.
4. Set Length 1 to the first fixed length by following the [MSI/Plessey Length 1, Length 2 Programming Instructions](#) below.
5. Set Length 2 to the second fixed length (or to '00' if there is only one fixed length) by following the [MSI/Plessey Length 1, Length 2 Programming Instructions](#) below.

Configuring Variable Length Decoding:

1. Scan the START/END bar code.
2. Scan the Variable Length Decoding bar code.
3. Scan the START/END bar code.
4. Set Length 1 to the first variable length by following the [MSI/Plessey Length 1, Length 2 Programming Instructions](#) below.
5. Set Length 2 to the second variable length by following the [MSI/Plessey Length 1, Length 2 Programming Instructions](#) below.

START / END	
PROGRAMMING BARCODES	
	Variable Length Decoding DEFAULT
Fixed Length Decoding	

MSI/Plessey – continued

MSI/Plessey Length 1, Length 2 Programming Instructions

1. Scan the START bar code.
2. Scan either the Set Length 1 or Set Length 2 bar code.
3. Turn to [Appendix C, Alpha-Numeric Pad](#) and scan the two digits representing the length in decimal notation.

For MSI/Plessey bar codes, all check and data characters are included in the length calculations.

NOTE

4. Scan the END bar code.

START / END	
PROGRAMMING BARCODES	
 DEFAULT SETTING FOR THIS FEATURE: 04	Set Length 1
Set Length 2	 DEFAULT SETTING FOR THIS FEATURE: 16 decimal

MSI/Plessey – continued

MSI/Plessey Stitching

Enables/disables stitching for MSI/Plessey bar codes. When parts of an MSI/Plessey label are presented to the scanner with this feature enabled, the bar code parts will be assembled by the scanner's software, and the data will be decoded if all bar code proofing requirements are met.

Only functions when Fixed Length Decoding is enabled.

NOTE

START / END	
PROGRAMMING BARCODES	
	Disable MSI/Plessey Stitching DEFAULT
Enable MSI/Plessey Stitching	

MSI/Plessey – continued

Minimum Reads

This feature specifies the minimum number of consecutive times an MSI/Plessey label must be decoded before it is accepted as good read.

START / END	
PROGRAMMING BARCODES	
	Minimum = 1 Read DEFAULT
Minimum = 2 Reads	
	Minimum = 3 Reads
Minimum = 4 Reads	

Standard 2 of 5

The following options apply to the Standard 2 of 5 symbology.

Disable/Enable Standard 2 of 5

When this feature is disabled, the scanner will not read Standard 2 of 5 bar codes.

START / END	
PROGRAMMING BARCODES	
	Disable Std 2 of 5 DEFAULT
Enable Std 2 of 5	

Check Digit Verification

When enabled, the scanner will verify the check digit of the labels.

START / END	
PROGRAMMING BARCODES	
	Disable Check Digit Verification DEFAULT
Enable Check Digit Verification	

Standard 2 of 5 – continued

Check Digit Transmit

When this option is enabled, the scanner will transmit the check digit.

START / END	
PROGRAMMING BARCODES	
	Disable Check Digit Transmission
Enable Check Digit Transmission DEFAULT	

Standard 2 of 5 — continued

Length Control

Fixed Length Decoding — When fixed length decoding is enabled, the scanner will decode a bar code if the label length matches one of the configurable fixed lengths.

Variable Length Decoding — When variable length decoding is enabled, the scanner will decode a bar code if the label length falls in the range of the configurable minimum and maximum length.

Configuring Fixed Length Decoding:

1. Scan the START/END bar code.
2. Scan the Fixed Length Decoding bar code.
3. Scan the START/END bar code.
4. Set Length 1 to the first fixed length by following the [Standard 2 of 5 Length 1, Length 2 Programming Instructions](#) below.
5. Set Length 2 to the second fixed length (or to '00' if there is only one fixed length) by following the [Standard 2 of 5 Length 1, Length 2 Programming Instructions](#) below.

Configuring Variable Length Decoding:

1. Scan the START/END bar code.
2. Scan the Variable Length Decoding bar code.
3. Scan the START/END bar code.
4. Set Length 1 to the first variable length by following the [Standard 2 of 5 Length 1, Length 2 Programming Instructions](#) below.
5. Set Length 2 to the second variable length by following the [Standard 2 of 5 Length 1, Length 2 Programming Instructions](#) below.

START / END	
PROGRAMMING BARCODES

Product Specifications

Optical and Read Performance Parameters

Parameter	Specification
Scan Volume	70 cubic inches
Scan Pattern	100 line
Scan Rate	1,000 digital scan lines
Minimum Resolution	5 mil
Depth of Field (100% UPC Labels)	0 - 6"
Minimum Print Contrast Ratio	25%
Skew (Yaw)	$\pm 75^\circ$
Pitch	$\pm 65^\circ$
Roll	Between 0 and 360°

Scanner Dimensions

Physical Properties

Parameter	Specification
Dimensions (Scanner only):	3.3" x2.8" x3.7"
Dimensions (Scanner w/Base Station):	5.5" x2.9" x3.8"
Weight (Scanner)	7.0 oz.
Weight (Base Station)	6.6 oz.

Electrical Parameters

Parameter	Specification
Operating Voltage	(Two Models) 5V unit = 5.0V ± 5% 12V unit = 7-12V ± 5%
Input Current	
Operating (idle)	<300mA
Operating (label read)	<400 mA
Surge Current (< 30 ms)	<600mA

Environmental Parameters

Parameter	Specification
Mechanical Shock	Multi 1.2m drops
Contaminants Water and Dust	IP52
Temperature Ranges:	
Operating	32° F to +104° F (0° C to +40° C)
Storage	-40° F to +158° F (-40° C to + 70°C)
Ambient Light Indoor	<6000 lux
Ambient Light Outdoor	<86,100 lux
Humidity	5 to 95% non-condensing
Beeper/Speaker	70-85dBA at a distance of 3'-3" (1 meter)
Vibration	Retail/Office

Other Parameters

Parameter	Specification
EAS Support	YES (Checkpoint)

Default Settings

Defaults by Symbology

The following is a partial list of key settings for each symbology type.

Code Type	Read Enable	Checksum Verification Enable	Checksum Transmission Enable	Label ID
UPC-A	✓	✓	✓	A
UPC-E	✓	✓	✓	E
EAN-13	✓	✓	✓	F
EAN-8	✓	✓	✓	FF
RSS-14				R4
RSS Expanded				RX
Code 39	✓		✓	*
PharmaCode 39				A
Code 128	✓			#
Interleaved 2 of 5			✓	i
Codabar			✓	%
Code 93				&
MSI/Plessey			✓	@
Standard 2 of 5			✓	s

Interface Default Exceptions

The factory default settings indicated in the programming sections (in bold text) reflect factory configuration for the RS-232 standard interface. The following tables list default exceptions by interface for the remaining available interfaces.

IBM Interfaces

IBM Interfaces include IBM-USB, IBM Port 9B, IBM Port5B and IBM Port17.

Parameter	Default Setting
IBM Interface Type	IBM Port 9B
Number of Host Transmit Buffers	One Buffer
Label I.D. Transmission	Disable
Suffix Characters	No Suffix

RS-232 Wincor/Nixdorf

Parameter	Default Setting
Interface Type	RS-232-WN
Number of Host Transmit Buffers	One Buffer
RS-232 Parity	Odd
RS-232 Hardware Control	CTS Flow Control
UPC-E Check Character Conversion	Disabled
UCC/EAN-128 Label ID	'P'
Code 39 Label ID	'M'
Code 93 Label ID	'L'
Code 128 Label ID	'K'
Codabar Label ID	'N'
EAN-8 Label ID	'B'
EAN-13 Label ID	'A'
ISBN Label ID	'A'
Interleaved 2 of 5 Label ID	'I'
Standard 2 of 5 Label ID	'H'
MSI/Plessey Label ID	'O'
UPC-E Label ID	'C'
RSS-14 Label ID	'E'
RSS Expanded Label ID	'E'

Wand Emulation

Parameter	Default Setting
Interface Type	Wand Emulation
Code 39 Start/Stop Character Transmission	Enable

Keyboards

Keyboard interfaces include USB Keyboard and Keyboard Wedge A-Y.

Parameter	Default Setting
Keyboard Wedge Interface Type	USB Keyboard
Label ID Transmission	Disable

NOTES

Appendix E

Keyboard Function Key Mappings

Keyboard Model Cross Reference

Table E-1 summarizes the keyboard models, their defined protocol, scancode set, and some unique features. The remaining tables in this chapter provide the function key maps associated with each of the scancode sets.

Table E-1. Keyboard Model Cross Reference

Model Type	I/F ID	Transmission Protocol	Scancode Set	Func. Key Map Support	Use Country Mode
PC/XT Foreign ALT Mode	Wedge A	PC/XT	Scan Set 1	No	No
AT; PS/2 25-286; PS/2 30-286; PS/2 50, 50Z; PS/2 60,70,80,90,95 Foreign ALT Mode	Wedge B	AT/PS2	Scan Set 2	No	No
PS/2 25 and 30 Foreign ALT Mode	Wedge C	AT/PS2	Scan Set 1	No	No
PC/XT U.S. Mode	Wedge D	PC/XT	Scan Set 1	Yes	No
AT; PS/2 25-286; PS/2 30-286; PS/2 50, 50Z; PS/2 60,70,80,90,95 U.S. Mode + specific country support	Wedge E	AT/PS2	Scan Set 2	Yes	Yes
PS/2 25 and 30 U.S. Mode	Wedge F	AT/PS2	Scan Set 1	Yes	No
IBM 3xxx Terminals (122-key keyboard)	Wedge G	AT/PS2	Scan Set 3	Yes	No
IBM 3xxx Terminals (102-key keyboard)	Wedge H	AT/PS2	Scan Set 3	Yes	No
PS55 5530T with JAPANESE DOS (TDOS)	Wedge I	AT/PS2	Japanese DOS	Yes	No
NEC 9801	Wedge J	NEC 9801	NEC 9801	Yes	No

Table E-2. Scanset 1 Function Key Map

ASCII (hex)	ASCII code	Key	Scancode

Host Commands

Accepting RS-232 Commands

The scanner responds to the following RS-232 commands:

COMMAND	ASCII	HEX	COMMENT
Enable Scanner	E	0x45	
Disable Scanner	D	0x44	
Reset Scanner	R	0x52	
Not On File Indication	F	0x46	Long series of beeps
Beep Good Read Tone	B	0x42	Beeps if Good Read Beep is enabled
Force Good Read Tone		0x01	Beeps regardless of beep setting
Bel		0x07	Force Good Read Tone
Identification request	i	0x69	Returns long response ^a
Health request	h	0x68	Returns long response ^a
Status request	s	0x73	Returns long response ^a

a. Call Tech Support for information.

If one of the above commands is received, the scanner will perform the steps indicated for the command. Host commands for other interfaces are also available. Contact Tech Support for more details.
